

AGRI-FOAM

Agricultural Foam Marker Concentrate 80:1 Ratio

- Works in **soft** or **hard** waters up to 700 PPM without the use of additional water softening agents.
- Works in **both high** and **low pressure** foam generating equipment.
- Produces a **thick, long lasting white foam** when used as directed.

Utilize expensive fertilizers and herbicides more economically by including **AGRI-FOAM** in spraying operations. This synthetic, non-protein foam concentrate is formulated to mark spray swaths, when applied with conventional agricultural foam generators. AGRI-FOAM produces a thick, long lasting, highly visible foam, even under field conditions of extreme heat, intense sunlight and dry soil. **AGRI-FOAM** gives the applicator accurate applications of expensive agricultural chemicals.

Directions:

Add 1 gallon of **AGRI-FOAM** to 80 gallons of water. **AGRI-FOAM** is designed to work properly in soft or hard water. Water softening agents are not required, they are built into the product. To insure proper mixing, either premix concentrate with water or fill foam tank with half the desired amount of water, add the proper amount of **AGRI-FOAM** then add remaining water. The blue colour of AGRI-FOAM allows the operator to check for proper mixing by visual inspection.

To insure a good quality of foam, be certain to clean and flush the foam generating equipment before use. CHEM TITAN or FOAM TITAN from Share has been specially formulated to remove dirt, scale and other impurities that accumulate in foam generating equipment, without affecting the performance of **AGRI-FOAM**.

IMPORTANT: Do not mix **AGRI-FOAM** with any other foam marker concentrate. **AGRI-FOAM** is a carefully tested blend of foam additives and stabilizers that may not be compatible with other products. A mixture will therefore likely result in a poor quality foam.
