

CLEAR GEAR LUBE

GEAR & CABLE LUBRICANT

Form: Aerosol Liquid

Color: Clear

Odor: Light Solvent

- Special adhesion ingredients provide strong clinging ability to metal parts, reduces gear wear to increase service life and provide lower maintenance costs.
- Aerosol formula is mobile and also allows user to apply lubricant in hard-to-reach places.
- Recommended for use on rotary kiln gears, crane and shovel gears, chain and sprocket drives, drag lines, winch gears and other types of open gears.

CLEAR GEAR LUBE is Share's answer to a variety of lubrication problems associated with exposed moving parts. Made with a select group of high-performance ingredients, **CLEAR GEAR LUBE** firmly adheres to metal surfaces, provides excellent lubrication, tolerates high temperatures and pressure, and is water-resistant. What makes **CLEAR GEAR LUBE** so special is its ability to cling to moving parts (such as gears) without squeezing out or slinging off under high RPMs. As soon as it's sprayed onto machinery, it sets up to form a tacky yet greasy lubricating film. This promotes efficient use of **CLEAR GEAR LUBE** so that it constantly relubricates parts with every revolution that gears, chains, sprockets or other similar equipment may make. **CLEAR GEAR LUBE** won't wash off and can endure the weather extremes of summer and winter. To increase the service life of all your exposed equipment, use **CLEAR GEAR LUBE** from Share.

Use it to lubricate . . .

Gears
Steel Cables
Winches
Sprockets
Wire Ropes
Chains

Gear Boxes
Industrial Machinery
Heavy Construction Equipment
Conveyors
Oil Rigs

DIRECTIONS: Shake Well Before Using! Remove cap and hold can approximately 6 to 8 inches from surface to be sprayed. Apply a continuous film of lubricant, turn on machinery and allow the lubricant to spread over all working surfaces. Apply a second, thinner coat to insure adequate protection. Reapply as needed. After spraying, turn can upside down and spray for a few seconds until the nozzle is clear.
