

HEAVY DUTY PENETRATING OIL 17

Unlocks and Lubricates Corroded Parts

- *Penetrates and cleans hard to reach places.*
- *Low surface tension allows for easy penetration into gaps and threads.*
- *Residual film helps protect metal from further corrosion.*

When parts are locked due to corrosion, the key to freeing them is **HEAVY DUTY PENETRATING OIL 17**. Even when components and equipment won't budge, powerful penetrants work their way through oxidation deposits to release locked parts. The surface tension of these special penetrants is extremely low, so **HEAVY DUTY PENETRATING OIL 17** is easily absorbed into cracks and crevices. Within a few minutes, parts can be worked loose and return to their full range of motion. After dissolving corrosion, **HEAVY DUTY PENETRATING OIL 17** leaves a thin film of lubricant to ensure that parts move smoothly for longer periods of time.

Other Uses:

Battery Terminal Protection, Locks, Exhaust Systems, Rusted Bolts, Brake Cables, Pipe fittings, Speedometer Cables, Rusted Nuts, Parking Meters, Fuse Boxes, Electrical Relays, anywhere a general purpose lubricant is needed.

Directions:

Can be applied by a conventional oil can, or by spraying, pouring, brushing or dipping parts directly. Apply enough **HEAVY DUTY PENETRATING OIL 17** to saturate rusted area. Tap fitting lightly and allow several minutes to penetrate. For extreme cases, a second application should be made as soon as a slight movement is noticed. **HEAVY DUTY PENETRATING OIL 17** will protect parts from rust and corrosion.
