

HYDRANT ANTIFREEZE

Food Grade

- *Prevent frost damage.*
- *Protects up to -60F.*
- *Food grade ingredients.*

HYDRANT ANTIFREEZE is designed to prevent frost damage to exterior water hydrants. **HYDRANT ANTIFREEZE** is made with food grade ingredients to eliminate the possibility of contamination of potable water supplies. Undiluted **HYDRANT ANTIFREEZE** will protect hydrants down to -60F. A 1:1 dilution of **HYDRANT ANTIFREEZE** with water will protect down to -25F.

Directions:

Drain as much water as possible from hydrant. Fill hydrant with **HYDRANT ANTIFREEZE**, leaving air space below cover to allow liquid to expand and contract with changing temperatures. **HYDRANT ANTIFREEZE** is a food grade material that will not contaminate potable water supplies but treated hydrants should be rinsed thoroughly before the water is used for domestic purposes.
