

SETTING

Resilient Floor Sealer

- Makes an **excellent base** for additional high-gloss finishes.
- **Does not** oxidize, yellow or darken with age.
- Simple application with either a cotton mop or lambs wool applicator. **Formulated for use on most types of porous flooring materials.**

SETTING resilient floor sealer provides an excellent foundation for high-gloss finishes as it fills in the thousands of tiny imperfections in your floor's surface.

SETTING is a colourless, acrylic seal that acts as a separating layer between the floor surface and the floor finish. This separating layer creates a secure and adherable surface for the finish to grab hold of while the self-levelling formula assures a flat, smooth foundation. The resulting surface allows the gloss producing solids in the finish to bond together for a shinier, more radiant and more durable finish. **SETTING** is an excellent sealant for terrazzo, marble, quarry, ceramic tiles and most other flooring materials.

Other Uses:

Ceramic Tile, Slate, Vinyl, Cork, Rubber, Linoleum, Concrete

Directions:

APPLICATION: Thoroughly strip, rinse and allow the floor to dry. Ensure that all previous wax coatings have been removed and that stripper is neutralized. Apply **SETTING** using a cotton mop or lambs wool applicator. Apply a second coat after the first has thoroughly dried. Then apply two coats of a floor finish, based on what type of shine is desired on the floor.
