

# WASH

## Neutral Floor Cleaner

- Ideal for daily damp mopping of **high-traffic areas**.
- Contains a blend of pH adjusters and wetting agents to **remove scum and restore shine**.
- Improves wear and recoat properties of floors and **enhances the brilliance** of your floor's finish.

The most important part of any floor care program, and often the most overlooked, is the removal of dirt, dust and other debris that can work its way into your floor's finish, causing premature dulling and fading. **WASH** was specifically designed to be a safe and effective product to use on each of the Share finishes. With **WASH** neutral floor cleaner, extending the life of your finish is as easy as mopping a floor. **WASH** has a neutral pH and is completely water soluble, so it will not haze or yellow your existing floor finishes. If accessibility to automatic machines is impossible, it is the ideal product for a mop and bucket. On the floor, **WASH** suspends dirt and debris in solution. On the mop, it traps these scratch-producing contaminants, holding them until you wring them out into the bucket. This results in faster cleaning times, the removal of more scratch-producing matter and a brighter, shinier floor finish.

### Other Uses:

(dilution)

---

Furniture & Woodwork Cleaner (1:40), Optical & Lense Cleaner (1:50), Porcelain Cleaner (1:40), Gas Leak Detector (full strength), Pot & Pan Soap (1:10), Tire Mount Lubricant (1:5), Windshield Mount Lubricant (1:5)

### Directions:

---

For light duty daily damp mopping, use 1 ounce of **WASH** to 1 gallon of warm water. For the heavy duty cleaning of greasy floors, dilute 1 ounce of **WASH** to 1 litre of water.

1. MOP APPLICATION: In mop bucket equipped with wringer, prepare a cleaning solution consisting of 2-3 ounces of **WASH** per gallon of warm water. Immerse mop into solution and wring out about one-half to two thirds of cleaner. Mop should not have water dripping off of it, but feel damp to the touch. Clean the floor using a gentle side to side motion, be certain to cover all areas of the floor. **NO RINSING REQUIRED**. Heavier dirt accumulations of dried-on spills may require a vigorous scrubbing action for complete removal. Floor with heavy soiling may require a stronger cleaning solution of **WASH** neutral floor cleaner.
2. AUTO SCRUBBER APPLICATION: Prepare a cleaning solution consisting of 1-2 ounces of **WASH** per gallon of warm water. Clean floor with a red pad, being certain to cover all areas of the floor. **NO RINSING REQUIRED**. Heavier dirt accumulations of dried-on liquid spills may require a vigorous scrubbing action for complete removal. Floor with heavy soiling may require a stronger cleaning solution of **WASH** neutral floor cleaner.
