

PAN PUCKS

For Condensate Drain Pans

- *Moisture activates chemicals that **lock** the PAN PUCK to the drain pan.*
- *Does **not release** any chlorine or noxious/toxic fumes.*
- *Nothing to remove or throw away, PAN PUCKS **completely dissolve**.*

PAN PUCKS, a one-of-a-kind, hassle-free A/C drain pan treatment, locks itself into place, has a slow and continuous product release, works until completely used up and eliminates odours. As moisture drips on or flows over the puck, it activates the chemicals to lock the **PAN PUCK** into place. Once the puck is locked into place, it will form a gel that will slowly and continuously clean sludge and other accumulations, eliminating plugged condensate drain lines and stale water odours. Since there is no residual packaging associated with **PAN PUCKS**, there is nothing to remove from the drain pan prior to subsequent applications. The **PAN PUCKS** are 100% biodegradable, will never release any chlorine or other noxious/toxic fumes and are available in three sizes to handle any size system. This condensate drain pan cleaner is great for use in hospitals, hotels, food preparation areas, office buildings, schools, nursing homes, apartments, industrial plants and more.

Other Uses:

Fan Coiler Air Conditioner, Roof Mounted Units, Beverage Coolers, Cold Storage Walk-Ins, Ceiling Air Conditioning Units, Refrigerated Vending Machines, Grocery Reach-In Coolers.

Directions:

The **PAN PUCK** is simple to install. Place the unit under the cooling coil in the middle of the pan length. Unit must be in contact with the condensate in the pan. **PAN PUCK** locks itself into place and will dissolve completely. NOTE: Each puck lasts 6 months based on an average 8-hour air conditioning date.
