

# DYNASTY OHD

## Oil and Hydrocarbon Digesting

- *Bio-remediates, **digests** petroleum oils and grease, organic solids and sludge.*
- ***Reduces sludge** and solids build-up; reduces grey water pit pump-outs.*
- *Works to **reduce odours** in wash rack reclamation pits.*

**DYNASTY OHD**, a Biological Oil-Waste Digester is your best solution for reducing, digesting and degrading petroleum oils and grease, sludge and organic solids, the kind found in vehicle wash reclamation tanks and pits. It is also ideal for marine bilges and most other petroleum contaminated, wastewater containment areas.

**DYNASTY OHD** is a super-concentrate that contains 100,000,000 live bacteria per millilitre. That's about 400 billion per gallon, the highest count possible that is practical to keep alive and sustainable. That's why a little goes a long way to keep your total cost of operation as low as possible. These are living organisms that specialize in breaking down petroleum oils and organic waste of all kinds. Effective with gasoline, diesel fuel, heating oils, motor oil, crude oil and coal tar. The ultimate in cost-saving efficiency.

### Other Uses:

---

Car & Truck Washes, Petroleum Contaminated Waste Water, Marine Bilges, Oil/Water Separators.  
Effective Against: Gasoline & Diesel Fuel, Coal Tar, Motor Oil, Fuel Oil & Crude Oil.

### Directions:

---

To consume hydrocarbons and reduce sludge, solids and odours, feed 18 to 20 ounces per day into a 500 to 1,500 gallon tank (65 to 200 cubic feet). For tanks greater than 1,500 gallons (200 cubic feet), feed at a rate of 32 to 40 ounces per day.
